

Extreme Linux

A presentation featuring
Linux International's Executive Director
Jon "maddog" Hall

SGI will also be
presenting on the new
Linux-powered,
64-processor Altix 3000

Jon "maddog" Hall and SGI will be coming to central Florida to discuss **Extreme Linux**, which is any Linux system that pushes the limits of performance like Beowulf clusters, super-scalar CPU systems and Non-Uniform Memory Architecture (NUMA) systems. If you want to know about Linux running on the most powerful computers in the world, this presentation is for you!

Representing SGI will be Andrew Fenselau, Product Manager for the Altix 3000 product line, and Carlos Rojas, Senior Systems Engineer for Central Florida. They will be describing SGI's **Extreme Linux** vision, including detailed information about their Linux-based 64-processor Altix 3000 supercomputer.

Time:

March 7th 2003
7:00pm to 10:00pm

Location:

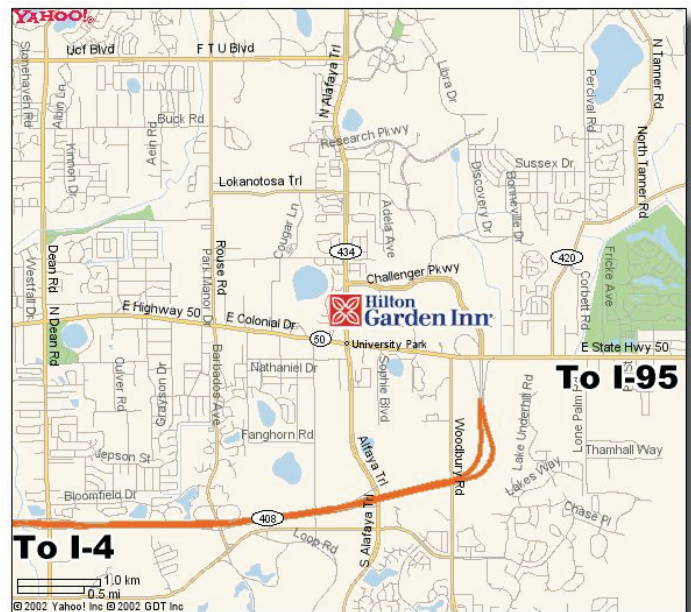

Hilton Garden Inn - Orlando East
